HTML Input assignment

Task: Use at least one slider and one button to add changes and animation to your sketch that can be changed by user interaction.

Mild:
Modify the existing code for the slider and button to do something different.
This will require you to make changes in the code in the sketch.js and index.html files

Example - Slider changes the size of the circle, button changes the color

Medium:
Add another slider and button to affect other parameters for the ellipse.
This will require you to add additional code in the sketch.js and index.html files

Example - Slider to change Y axis position, button to change color

Spicy:
Create one or more additional shapes in your sketch and add additional buttons and sliders to affect attributes of those additional shapes.

Examples: Add a rectangle and use a slider to change the width or height
Add a triangle and use a button to change it from a right triangle to an isosceles triangle
